

Azure Data Factory:

Step 1: Create Storage Account

Created a storage account named 'blobstorageein' to store the source data file.

Deployment name : blobstorageein_1776072597507

Subscription : Azure for Students

Resource group : inte-runtime-rg

Start time : 4/13/2026, 3:00:07 PM

Correlation ID : a71bbfae-10eb-4e1c-a801-2618a...

Deployment details

Resource	Type	Status	Operation de
blobstorageein/defz	Microsoft.Storage/storageAccou	OK	Operation de
blobstorageein/defz	Microsoft.Storage/storageAccou	OK	Operation de
blobstorageein	Storage account	OK	Operation de

Next steps

Go to resource

Step 2: Create Container

Created a container named 'datain' within the storage account to organize the data files.

Step 3: Create SQL Server

Created an Azure SQL Server named 'sqldbout' to host the destination database.

Step 4: Create SQL Database

Created a SQL database named 'sqldatabase' on the SQL Server to store the copied data.

Step 5: Create Table in SQL Database

Created a table named 'sales_data' with appropriate columns to receive the data from blob storage.

SQL query 1

Run Save as view

⚠ Your queries will be lost when your session ends. Use **Save as view** to keep results as a database

```
1 CREATE TABLE sales_data (  
2 id INT,  
3 customer_name VARCHAR(100),  
4 product VARCHAR(100),  
5 amount INT,  
6 city VARCHAR(50),  
7 order_date DATE  
8 );  
9
```

Step 6: Create Data Factory

Created an Azure Data Factory instance named 'datafactorydemo2026' to orchestrate the data pipeline.

Step 7: Create Blob Storage Linked Service

Created a linked service named 'AzureBlobStorage1' to connect Data Factory to the blob storage account. Connection was successfully established using account key authentication.

New linked service

 Azure Blob Storage [Learn more](#) 

Name *

AzureBlobStorage1

Description

Step 9: Create Dataset for Blob Storage

Created a dataset named 'DelimitedText1' pointing to the CSV file in blob storage. The file path is configured as 'datain/Directory/sales.csv' with first row as header enabled.

Set properties

Step 10: Pipeline Execution

Executed the pipeline using the Debug command. The pipeline successfully copied data from blob storage to the SQL database table.

» Data Factory Validate all Publish all 3 Migrate to Fabric (Preview)

Cancel

Step 11: Verify Data in SQL Database

Verified that the data was successfully copied to the SQL database by querying the sales_data table. Top 5 records were successfully transferred with correct data.
