

1) SSMS SQL Server Connection Establishment: (with SQL Authentication)

The screenshot shows the 'Connect' dialog box in SQL Server Enterprise Manager. The 'History' tab is selected, displaying a list of recent connections. The 'Connection Properties' tab is also visible, showing fields for Server Name, Authentication, User Name, Password, Database Name, Encrypt, and Trust Server Certificate. The 'Custom Properties' section is at the bottom.

2) Successfully Connected:

3) Creation of Table and Checking from the SSMS:

4) Inserted Data and Queried from the SSMS:

The screenshot displays the SQL Server Enterprise Manager (SSMS) interface. The top menu bar includes options like 'New query', 'Templates', 'Open in', 'Feedback', 'Sign out', and 'Classic experience'. The left pane shows the 'Explorer' view with a search bar and a tree structure containing 'Imsdb' and 'dbo'. The main editor window, titled 'SQL query 1', contains the following SQL code:

```
1 INSERT INTO Employees (EmpID, Name, Department, Salary)
2 VALUES
3 (1, 'Anuj', 'IT', 50000),
4 (2, 'Ravi', 'HR', 40000),
5 (3, 'Neha', 'Finance', 60000);
```

Below the editor, the 'Object Explorer' pane shows the database structure for 'Imsdb2026.database.windows.net (SQL Server 12.0.2000.8)'. The tree includes 'Databases', 'System Databases', 'Imsdb', 'Database Diagrams', 'Tables', 'System Tables', 'External Tables', 'Graph Tables', 'dbo.Employees', 'Dropped Ledger Tables', 'Views', 'External Resources', 'Synonyms', 'Programmability', 'Query Store', 'Extended Events', 'XEvent Profiler', 'Storage', 'Security', and 'Integration Services Catalogs'. The 'dbo.Employees' table is highlighted.

The bottom pane shows the results of the query. The status bar indicates 'No issues found' and 'Ln: 1, Ch: 24 TABS CRLF Windows 1252'. The 'Results' tab displays the following data:

	EmpID	Name	Department	Salary
1	1	Anuj	IT	50000
2	2	Ravi	HR	40000
3	3	Neha	Finance	60000

5) Updated value and Check from the SSMS:

The screenshot displays the SQL Server Enterprise Manager (SSMS) interface. The top window is the 'Query editor (preview)' for the 'Imsdb' database. It shows a SQL query being executed:

```
1 UPDATE Employees
2 SET Salary = 55000
3 WHERE EmpID = 1;
```

The bottom window shows the 'Object Explorer' on the left, displaying the database structure for 'Imsdb2026.database.windows.net (SQL Server 12.0.2000.8)'. The 'Employees' table is highlighted under the 'dbo' schema.

The right pane shows the results of the query, displaying a table with 3 rows and 5 columns: EmpID, Name, Department, Salary, and a row number. The data is as follows:

	EmpID	Name	Department	Salary
1	1	Anuj	IT	55000
2	2	Ravi	HR	40000
3	3	Neha	Finance	60000

6) Delete the data with “where” condition and Check from the SSMS:

The screenshot displays the SQL Server Enterprise Edition Query Editor interface. The top bar shows the database name 'Imsdb (Imsdb2026/Imsdb)' and the 'Query editor (preview)' tab. The left sidebar contains the 'Explorer' pane with a search bar and a tree view showing the database structure: 'Imsdb' > 'dbo' > 'Queries' > 'SQL query 1'. The main editor area shows a SQL query with two lines: '1 DELETE FROM Employees' and '2 WHERE EmpID = 2;'. Below the query editor, the 'Object Explorer' pane shows the database structure for 'Imsdb2026.database.windows.net (SQL Server 12.0.2000.8)'. The 'Tables' folder is expanded, showing 'dbo.Employees'. The 'Results' pane at the bottom shows the output of the query, which is an empty table with columns 'EmpID', 'Name', 'Department', and 'Salary'.

SQL query 1

```
1 DELETE FROM Employees
2 WHERE EmpID = 2;
```
