- 2) Created custom pipeline for the github version control and testing branches with the collaboration :

Two branches:

dev: in which a copy activity pipeline which uses hardcoded datasets and file paths.

Feature/copy-data-pipeline : makes the pipeline dynamic by changing the hardcoded dataset to the dynamic parameterized datasets

- 3) After the dev branch has created the pipeline, made a feature branch which will make the input dataset parameterized and will create a pull req to the dev branch:

feature/copy-data-pipeline branch
